FREE SLIDE DECK

Build Your First Skill Stack

A 10-slide walkthrough for combining skills that work well together

01

What a skill stack is

- One core skill you want to be known for
- Two or three supporting skills that make the core more useful
- The combination is what makes your work stand out

02

Pick your core skill

- Look at the work or roles you want
- Choose a skill that shows up often in that work
- Pick one you can practice every week

03

Add supporting skills

- A communication skill: writing, presenting or teaching
- A tool skill: spreadsheets, AI assistants or automation tools
- Knowledge of one industry or audience

04

Example stacks

- Data analysis + SQL + clear writing
- Content writing + SEO basics + email marketing
- Customer support + process documentation + automation tools

05

Plan in 4-week sprints

- One focus skill per sprint
- A weekly goal you can test, such as “build one dashboard”
- A short review at the end of each week

06

Learn by building

- Make one small project per sprint
- Share drafts and ask for feedback
- Keep a log of what you built and what you learned

07

Show your work

- Put projects on one simple portfolio page or document
- Add a short note on the problem, what you did and the result
- Update it after every sprint

08

Review and adjust monthly

- Which skill moved forward the most?
- Which skill is holding the stack back?
- Choose next month’s focus from your answers
